

Request for Proposal (RFP) — Build Response for Zia AI

RFP number: RSG-CREATOR-RECON-2026-01

Title: Zoho Creator application — RSG Policy Reconciliation

Issuer: Risk Solutions Group

Respondent: Zia AI (Zoho Creator)

Issue date: 2026-08-18

Response type: Build the application in Zoho Creator. Do not write a sales proposal. Do not invent scope.

This RFP is the statement of work. Attach it to Zia together with the PRD, BRD, and process-diagram PDF. Field CSVs and Deluge in `ZIA_UPLOAD.xlsx` are the data appendix and win over prose if they conflict.

1. Invitation

RSG invites Zia to **create** a Zoho Creator application that reconciles insurance policies across NowCerts (AMS), Zoho CRM, and the renewal worklist.

Success is a working Creator app that matches this RFP. Failure is extra forms, renamed verdicts, invented fields, LLM-based scoring, or any NowCerts write.

2. Scope of work

In scope

- Application display name: **RSG Policy Reconciliation**
- Application link name: `rsg_policy_reconciliation`
- Exactly **five** forms, API names in this order:
 - `Policy_Master`
 - `Policy_Status_History`
 - `Renewal_Queue`
 - `Policy_Audit`
 - `Audit_Exceptions`
- Every field in the form dictionary (appendix / Excel sheets)
- Every picklist value exactly as listed
- Lookups and related lists as specified
- Role permissions: Lamar Admin, Gretchen CSR

- Status-history hook on Policy_Master add/edit
- **Phase 1 only** until the issuer confirms Phase 2

Out of scope (reject if proposed)

- Additional forms in Phase 1
- NowCerts / Momentum POST, Insert, PartialUpdate
- `zoho.crm.createRecord` for Accounts
- Commission posting
- Client portal
- Renaming the 12 verdicts
- A generative model inside `thisapp.recon.verdict` or `score`

3. Mandatory technical requirements

ID	Requirement	Proof
M1	Deluge_Name in CSVs = Creator field link names	Export of link names
M2	Unique NowCerts_Policy_GUID when present; Policy_Number not unique	Duplicate Policy_Number save succeeds
M3	12 verdicts, first-match order in the BRD/PRD	Run Recon on seeds (Phase 2)
M4	Confidence S1-S25 point table, integer 0-100	Seed expected_confidence
M5	Cancel class required on Cancelled / Flat Cancel / Pending Cancel	Save blocked
M6	Is_Rewrite requires Rewrite_Of	Save blocked
M7	Active checkbox true only if Policy_Status = Active	On save
M8	No __c suffixes	Link names
M9	CRM write only if Approved_To_Push AND Approved_By AND Approved_At within 24h AND Recommended_Payload non-empty	Phase 4 stub returns gate failed otherwise
M10	Integration user cannot set Approved_To_Push	Permissions

4. Deliverables by phase

Phase	Deliverable	Issuer action
1	App + 5 forms + fields + picklists + lookups + history hook + views skeleton + permissions	Issuer reviews. Zia waits.
2		

Phase	Deliverable	Issuer action
	thisapp.recon.* functions, Run Recon button, Policy_Audit / exceptions	Issuer runs sample seeds
3	Schedules 6:45am ET daily, Sunday Tier C, weekday SLA sweep, notifications	Issuer watches one dry run
4	pullCRM read; gated pushCRMIfApproved	Sandbox only
5-6	Optional Hermes health; Analytics	Later RFP addendum

5. Data appendix (must follow)

Artifact	Contents
forms_policy_master.csv (and four sibling CSVs)	Field create list
picklists.csv	Exact option strings
views.csv / workflows.csv	Reports and automation
deluge/01 through 08	Copy-paste functions
tests/sample_records.json	Only allowed seed policies
Process diagrams PDF	Flows Zia must implement

If prose in this RFP and a CSV disagree, **the CSV wins**. If Deluge comments and the scoring table disagree, **the scoring table in the PRD/BRD wins**.

6. Evaluation (how RSG will judge the build)

Weight	Criterion
30%	Schema completeness (five forms, all fields, exact picklists)
25%	Verdict order and seed accuracy (Phase 2)
20%	Guardrails (no AMS write, no Account create, approval gate)
15%	Permissions (Gretchen vs Lamar)
10%	Operational fit (views, SLA hours, stale-touch rule)

Any invented policy number, premium, or GUID in sample data is an automatic fail.

7. Response instructions for Zia

1. Read PRD, BRD, this RFP, and the process diagrams.
2. Load field dictionaries from the attached Excel/CSV/JSON pack.

3. Create the Creator application.
4. Execute **Phase 1 only**.
5. Reply with: form names created, field counts per form, picklist keys loaded, and a list of anything you could not create (field name + reason). Do not silently skip.
6. Do not start Phase 2 until the issuer says to proceed.

8. Legal / operating constraints

- NowCerts is the system of record for policy facts.
- Zoho CRM is the system of record for Accounts, Contacts, Deals.
- Human approval is required for CRM writes. There is no Creator path to AMS writes.
- Test seeds use RSG-TEST-* numbers only.

9. Issuer contacts

- Product / approvals: Lamar
- CSR operator: Gretchen
- Build agent: Zia AI on Zoho Creator
