

Business Requirements Document (BRD)

Initiative: Insurance Policy Reconciliation Agent

Organization: Risk Solutions Group (RSG)

Application: Zoho Creator — RSG Policy Reconciliation

Version: 1.0

Date: 2026-08-18

Sponsor: Lamar, Operations

Prepared for: Zia AI (Zoho Creator) build

1. Business purpose

Protect retention (Project 85, target 75%+) and book integrity by making AMS / CRM / renewal-queue disagreement **visible, classified, and owned** every business day.

Drift today causes:

- false tombstones (CRM or mirror says gone; AMS still has the policy)
- unclassified cancellations (Non Pay treated like Rewrite, or the reverse)
- stale 30-day renewals with no recorded touch
- premium in CRM that does not match NowCerts
- duplicate policy rows that inflate or hide the book

2. Stakeholders

Stakeholder	Interest	Authority
Lamar	Book, money, High/Critical exceptions, CRM push approval	Product owner / Admin
Gretchen	Daily CSR work: cancels, renewals, Low/Medium exceptions	CSR user
Hermes (system)	Scheduled CRM pull, optional health read	Integration; no approvals
NowCerts	Policy system of record	Not written by this app
Zoho CRM	Account / Deal / Policy mirror	Read always; write only when approved

3. Current state vs future state

Current	Future
Operators compare AMS, CRM, and renewal lists by memory and exports	Creator <code>Policy_Master</code> holds the working copy; agent compares snapshots
Status changes are not a durable trail	Every status/Active change inserts <code>Policy_Status_History</code>
Cancel reason is free text or missing	Required <code>Cancellation_Class</code> enumeration
Rewrites look like lost policies	Heuristic + human link <code>Rewrite_Of</code> / successor
Stale renewals discovered late	Queue stale rules (7/14 day by cadence) + CSR view
CRM updates happen ad hoc	Draft payload on <code>Policy_Audit</code> ; execute only through approval gate

4. Systems of record (business rule)

Domain	Winner	This app
Policy facts (status, premium, dates, carrier, GUID)	NowCerts	Copy + flag CRM lag
Accounts, Contacts, Deals	Zoho CRM	Stamp IDs only; never create Accounts
Renewal eligibility / Project 85 ledger	Hermes / Supabase	Creator queue is a worklist , not a second eligibility engine
Commissions	Hermes money tables	Flag premium drift only; do not book
Notes, assignment, last contact	Human in Creator/ CRM	AMS pull must not overwrite Notes

Conflict table (must implement):

- AMS vs CRM on premium/dates/carrier/status → NowCerts wins; verdict `stale_crm` or `status_mismatch`; draft CRM update
- Duplicate number or GUID → `duplicate_policy`; human merge
- Outbound sync still pending → `pending_sync`; do not re-push
- Cancelled + overlapping new policy same insured+LOB → `rewrite_detected`
- CRM has policy, AMS GUID empty → `missing_in_ams`; **do not tombstone**
- AMS has policy, CRM ID empty >24h → `missing_in_crm`; no Account create

5. Business requirements

ID	Requirement	Priority
BR-01	Maintain one Policy_Master row per NowCerts policy GUID	Must
BR-02	Policy_Number is not database-unique so duplicates can be recorded and flagged	Must
BR-03	Normalize AMS/CRM status and billing to the RSG picklists; unknown status is Error	Must
BR-04	Classify every cancel: Non Pay, Rewrite, Insured Request, Underwriter, Other	Must
BR-05	Detect rewrites: same insured GUID + same LOB + successor effective within 60 days of cancel/expiration	Must
BR-06	If multiple successor candidates, cap confidence at 60 and open High exception — human picks the link	Must
BR-07	Hybrid premium discrepancy: $\geq \$25$ OR $\geq 1\%$	Must
BR-08	Agency_Fee is shop fee, not commission; missing Agency Bill fee is info, not financial_discrepancy alone	Must
BR-09	Renewal queue stale: 7 days in 30/Past Due Open or In Progress; 14 days in 60 Open; or policy left Open after terminal status; or expiration dates disagree	Must
BR-10	Last_Touched_At updates only on Queue_Status, Last_Contact_Date, Strategy_Notes, Risk_Status — not form open	Must
BR-11	Never hard-delete Policy_Master or Renewal_Queue; dismiss = checkbox + status	Must
BR-12	Exception SLA (calendar hours v1): Critical 4, High 24, Medium 72, Low 120	Must
BR-13	Auto-close Open exceptions on later clean_match only if prior verdict was pending_sync or stale_crm	Must
BR-14	Gretchen cannot resolve High/Critical; cannot approve CRM push	Must
BR-15	Policy_Tier: A if annualized $\geq \$5000$ or Commercial premium $\geq \$2500$; B if Active or expiring ≤ 90 days; else C	Must
BR-16	Daily recon 6:45am ET for A/B/Active/120-day window/dirty verdicts; weekly Sunday 7:00am for Tier C	Must
BR-17	No NowCerts write APIs from Creator	Must
BR-18	No Zoho CRM Account create; Policy create is a human-executed draft	Must

6. Process requirements

See attached process diagrams (same package):

1. Systems of record
2. Daily reconciliation

3. Verdict decision tree
4. Cancellation and rewrite
5. Exception and SLA
6. Approval-gated CRM write

7. Data requirements (forms)

Five forms only. Field dictionaries are the `forms_*.csv` files (appendix). Summary:

- **Policy_Master:** identity, insured snapshot, coverage, status, dates, financials, lineage, recon stamps, approval gate
- **Policy_Status_History:** source system AMS/CRM/Creator/Hermes; old/new status and Active
- **Renewal_Queue:** premiums current/renewal, Increase_Percent formula, Risk_Status, Cadence_Bucket, stale flags
- **Policy_Audit:** Run_ID, verdict, confidence, snapshots, findings vs recommendation, Recommended_Payload JSON
- **Audit_Exceptions:** severity, SLA clocks, resolution class

8. Assumptions

- Zoho CRM Policies custom module exists or will exist per `docs/zoho/fields_policies.csv`
- Gretchen and Lamar have Creator users
- Phase 1 has no live CRM connection
- Seed data is only `tests/sample_records.json` (prefixed RSG-TEST-)

9. Constraints

- Time zone America/New_York
- USD, 2 decimals
- Picklist strings are exact (including `Won't Fix`, `Non Pay`, `AT_RISK`)
- Deluge dialect may need minor syntax adjust; **logic and names must not change**

10. Acceptance (business)

Business accepts Phase 2 when each seed verdict/confidence in `acceptance_cases` is reproduced with no invented policies. Business accepts Phase 4 when a sandbox CRM push is blocked without the approval trio and Accounts are never created.
